

The Eagle

Presence Registration module

- Full WEB application
- Direct insight in the presence and absence of all persons
- Suits all types of organizations regardless of the size, the number of employees and the location
- Unlimited number of statuses, such as In, Out, Break, Do not disturb, Travelling etc.
- Unlimited number of persons
- Fire report can be generated at any time
- Identification using photo
- Sorting and filtering on predefined features
- Multiple reports
- Integrated with all other Eagle modules

The Eagle **presence registration** module is the ideal tool for those who need to know at any time who is present. The Eagle **presence registration** module is an indispensable tool for receptionists, telephone operators, security personnel, etc.

The Eagle **presence registration** module gives in the blink of an eye answers to questions, such as:

- In case of emergency – Who is in?
- At the reception desk – How many persons are in, on which location, in which building and department?
- Upon departure – Are you the last one to leave?
- When someone can not be reached – Is he absent, is he in a different location, is he travelling or does he simply not want to be disturbed?

Direct insight in the presence and absence of all persons

Always see the actual status of the selected group of persons in a clear and simple manner. Due to the fact that you can select the location, building, department etc., only the group you are interested in is displayed. If you need to trace a single person from a long list, simply type the first letters of his name and the person is automatically selected. Thanks to the possibility to select specific items, you can view persons which have special tasks within the organization, such as firemen, first-aid persons etc.

Emergency situation

In case of emergency, the Eagle **presence registration** module will always generate the required information. The fire report can be displayed on the screen but also sent to all printers on the network. The fire report indicates who is in and at which mustering point each person has to report as well as where and when everyone punched last. The list is generated per mustering point and for ease of use the names are grouped per department in alphabetic order. If the **Eagle** system is connected to the fire alarm system all designated doors can be automatically set to open.

Identification using photos

With every new transaction the photo of the person can be displayed together with the status (In, Out, etc.), the date and the time. This quickly informs you about the arrival or departure of persons.

Single and multi-user

Due to the fact that the Eagle **presence registration** module is a WEB application, all users can view the information at the same time and each user can select the group he is interested in. In addition, the system manager can limit the group of persons one is allowed to view.

Integration with other modules

The Eagle **presence registration** module is fully integrated with all other modules of the **Eagle** line of products using the same (MSSQL) database.
